ONLINE MEETINGS DONE RIGHT

An online meeting is a fully interactive, live online exchange between you and your coworkers, customers or partners. Think of your computer screen being populated with live audio/video feeds of the other participants of your meeting, so you all appear to be sitting around a conference room table together. That is the power of online meetings.

Whether you are a session organizer or meeting attendee, Onstream Meetings will help you to collaborate effortlessly in the cloud.

Whether you want to make a sales call, produce a product demo, hold an internal team meeting or engender an executive board meeting, Onstream Meetings can help you do it all quickly, easily and cost effectively.

Onstream Meetings is ideal for impromptu discussions, internal or external gatherings, demos, training sessions, negotiations or daily collaboration with remote team members.

With online meetings, you can improve productivity and save on travel costs by presenting your information and discussion through your own branded meetings site. Use your online meeting to securely share confidential documents and to easily share your desktop and applications with desktop and mobile users.

Onstream Meetings is accessible anytime and from anywhere – with no scheduling required. This cloud-based service will allow you to enhance your interactions with customers, prospects and colleagues and to receive a considerable return on investment.

ONSTREAM MEETINGS

KEY BENEFITS

Easy to Use – Onstream Meetings is easy to use for both hosts and participants. The simple, intuitive interface makes starting and conducting a meeting easy – all that is needed is a web browser to join. No additional software is necessary.

Accessible – The meetings allow you to share your webcam, video clips, documents and whiteboard with participants, whether they are sitting at a desktop computer or they are on the go with a mobile device.

Cost Effective – Conduct as many meetings as you like for one low, monthly rate, regardless of duration or frequency. There are no overages to worry about.

Secure – All sessions include end-to-end, 128-bit encryption. Additional security features, such as unique participant links and password protection can be enabled if desired.

Cloud-based – Easily set up and manage your meetings in the cloud. No hardware or software pre-installation, training or configuration is required.
